

PROJECT INFORMATION

Project Title:	295 Quinella Rd, Sunland Park, NM
Project Type:	LAND SALE, EXCHANGE
Latitude/Longitude (DMS):	31.805719 / -106.571670
County(s):	DONA ANA
Project Description:	South Central Rural Transit District (SCRTD) is a regional transit district serving
	incorporated and unincorporated communities in the counties of Dona Ana, Sierra, Otero,
	and El Paso counties; the cities of Anthony, El Paso, Elephant Butte, Las Cruces,
	Mesilla, and Sunland Park, and the Villages of Hatch and Williamsburg. The purpose of
	this proposed project is to replace gas powered buses with electric powered, install solar-
	powered charging stations, and purchase the current project site which is currently being
	leased. There is a need to help reduce air emissions as part of the goals laid out within
	the New Mexico State Management Plan. Additionally, by purchasing the land, the
	SCRTD would not be subjected to increased lease costs and the funds can be put to use
	on providing services to these low-income communities. The SCRTD will be using federal
	funds to purchase three (3) battery electric replacement buses and electric charging
	infrastructure at the Sunland Park garage (295 Quinella Road) and staff training on the
	electric vehicle propulsion systems. The SCRTD will also use the funds to acquire the
	property that is currently leased. The project area contains two existing buildings
	(Administration/Training and Maintenance buildings) and approximately 7.94 acres of
	disturbed, excess land. In total, the project area is 11.16 acres.

REQUESTOR INFORMATION

Project Organization:	
Contact Name:	Leah Markiewitz
Email Address:	Lmarkiewitz@ziaeec.com
Organization:	Zia Engineering & Environmental Consultants, LLC
Address:	755 S. Telshor Blvd., Suite Q-201, Las Cruces NM 88011
Phone:	575-532-1526

OVERALL STATUS

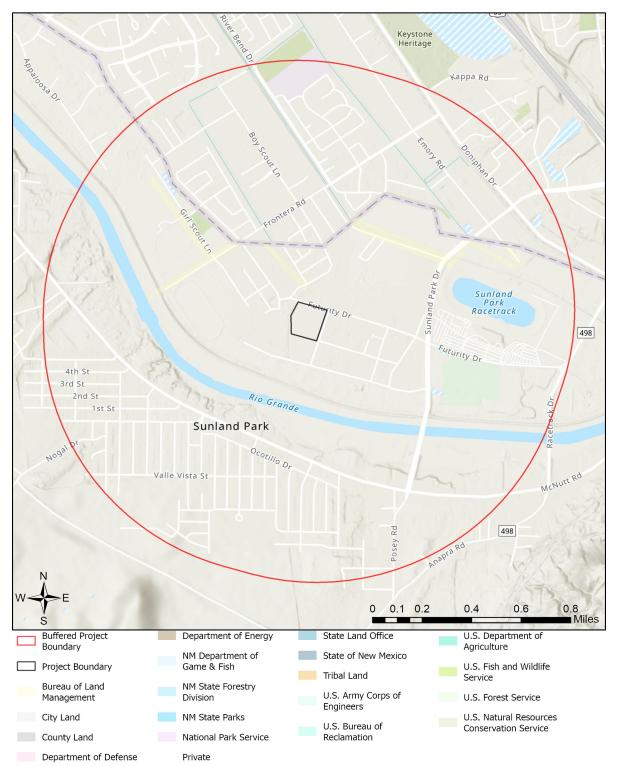

The information contained within this report comprises the recommendations of the New Mexico Department of Game and Fish (Department) for management and mitigation of proposed project impacts to wildlife and habitat resources; see the Project Recommendations section below for further details. No further consultation with the Department is required based on the project's location and, with implementation of mitigation measures described in the Project Recommendations section below, no adverse effects to wildlife or important habitats are anticipated. However, a Department biologist may be in touch within 30 days if they determine that further review is required.

About this report:

- This environmental review is based on the project description and location that was entered. The report must be updated if the project type, area, or operational components are modified.
- This is a preliminary environmental screening assessment and report. It is not a substitute for the potential wildlife knowledge gained by having a biologist conduct a field survey of the project area. Federal status and plant data are provided as a courtesy to users. The review is also not intended to replace consultation required under the federal Endangered Species Act (ESA), including impact analyses for federal resources from the U.S. Fish and Wildlife Service (USFWS) using their Information for Planning and Consultation tool.
- The New Mexico Environmental Review Tool (ERT) utilizes species observation locations and species habitat suitability models, both of which are subject to ongoing change and refinement. Inclusion or omission of a species within a report cannot guarantee species presence or absence within your project area. To determine occurrence of any species listed in this report, or other wildlife that may be present within your project area, onsite surveys conducted by a qualified biologist during appropriate, species-specific survey timelines may be necessary.
- The Department encourages use of the ERT to modify proposed projects for avoidance, minimization, or mitigation of wildlife impacts. However, the ERT is not intended to be used in a repeatedly iterative fashion to adjust project attributes until a previously determined recommendation is generated. The ERT serves to assess impacts once project details are developed. The <u>New Mexico Crucial Habitat Assessment Tool</u> is the appropriate system for advising early-stage project planning and design to avoid areas of anticipated wildlife concerns and associated regulatory requirements.

ies Act. WCA = Wildlife Conservation Act. SGCN of Economic and Recreational Importance, C = Candidate, E = Endangered, T = Threatened

Project Recommendations

Your proposed project activities may require a custom review for assessment of potential effects to wildlife. See the "OVERALL STATUS" section above to determine the likelihood that your project will be reviewed further based on its location. A Department biologist will confirm whether any additional conservation measures are needed. You should expect to receive any additional project recommendations within 30 days of your project submission. If the "OVERALL STATUS" section indicates that no further consultation with the Department is required based on its location, then you will only receive additional project feedback from the Department if a biologist deems it necessary.

Burrowing owl (Athene cunicularia) may occur within your project area. Before any ground disturbing activities occur, the Department recommends that a preliminary burrowing owl survey be conducted by a qualified biologist using the Department's <u>burrowing owl survey protocol</u>. Should burrowing owls be documented in the project area, please contact the Department or USFWS for further recommendations regarding relocation or avoidance of impacts.

The proposed project occurs within or near a riparian area. Because riparian areas are important wildlife habitats, the project footprint should avoid removing any riparian vegetation or creating ground disturbance either directly within or affecting the riparian area, unless the project is intended to restore riparian habitat through non-native plant removal and replanting with native species. If your project involves removal of non-native riparian trees or planting of native riparian vegetation, please refer to the Department's habitat handbook guideline for Restoration and Management of Native and Non-native Trees in Southwestern Riparian Ecosystems.

Disclaimers regarding recommendations:

- The Department provides technical guidance to support the persistence of all protected species of native fish and wildlife, including game and nongame wildlife species. Species listed within this report include those that have been documented to occur within the project area, and others that may not have been documented but are projected to occur within the project vicinity.
- Recommendations are provided by the Department under the authority of § 17-1-5.1 New Mexico Statutes Annotated 1978, to provide "communication and consultation with federal and other state agencies, local governments and communities, private organizations and affected interests responsible for habitat, wilderness, recreation, water quality and environmental protection to ensure comprehensive conservation services for hunters, anglers and nonconsumptive wildlife users".
- The Department has no authority for management of plants or Important Plant Areas. The <u>New Mexico</u> <u>Endangered Plant Program</u>, under the Energy, Minerals, and Natural Resources Department's Forestry Division, identifies and develops conservation measures necessary to ensure the survival of plant species within New Mexico. Plant status information is provided within this report as a courtesy to users. Recommendations provided within the ERT may not be sufficient to preclude impacts to rare or sensitive plants, unless conservation measures are identified in coordination with the Endangered Plant Program.
- Additional coordination may also be necessary under the federal ESA or National Environmental Policy Act (NEPA). Further site-specific recommendations may be proposed during ESA and/or NEPA analyses, or through coordination with affected federal agencies.
