

PROJECT INFORMATION

Project Title: 506 Arroyo Ls Lagunitas Grazing Permit
Project Type: GRAZING, GRAZING-NEW AREAS OR LONG-TERM INCREASE IN NUMBERS
Latitude/Longitude (DMS): 36.250153 / -106.146445
County(s): RIO ARRIBA
Project Description: The purpose of the Action is to authorize grazing on a previously grazed vacant allotment and approve the construction of approximately 3 miles of boundary fencing on public land, for the purpose of livestock management. The need for the Action is established by the BLM, for and in consideration of the mutual benefits hereunder, and in accordance with the Taylor Grazing Act (43 U.S.C. 315c), as amended, which allows for cooperative agreement for the construction and/or maintenance of range improvements, installation of conservation works or establishment of conservation practices, hereinafter referred to collectively as improvements, for the benefit of the public lands and of the cooperator(s).

REQUESTOR INFORMATION

Project Organization:
Contact Name: Erin Salano
Email Address: erin.salano@dgf.nm.gov
Organization: New Mexico Department of Game and Fish
Address: 1 Wildlife Way, Santa Fe NM 87507
Phone: 5053215485

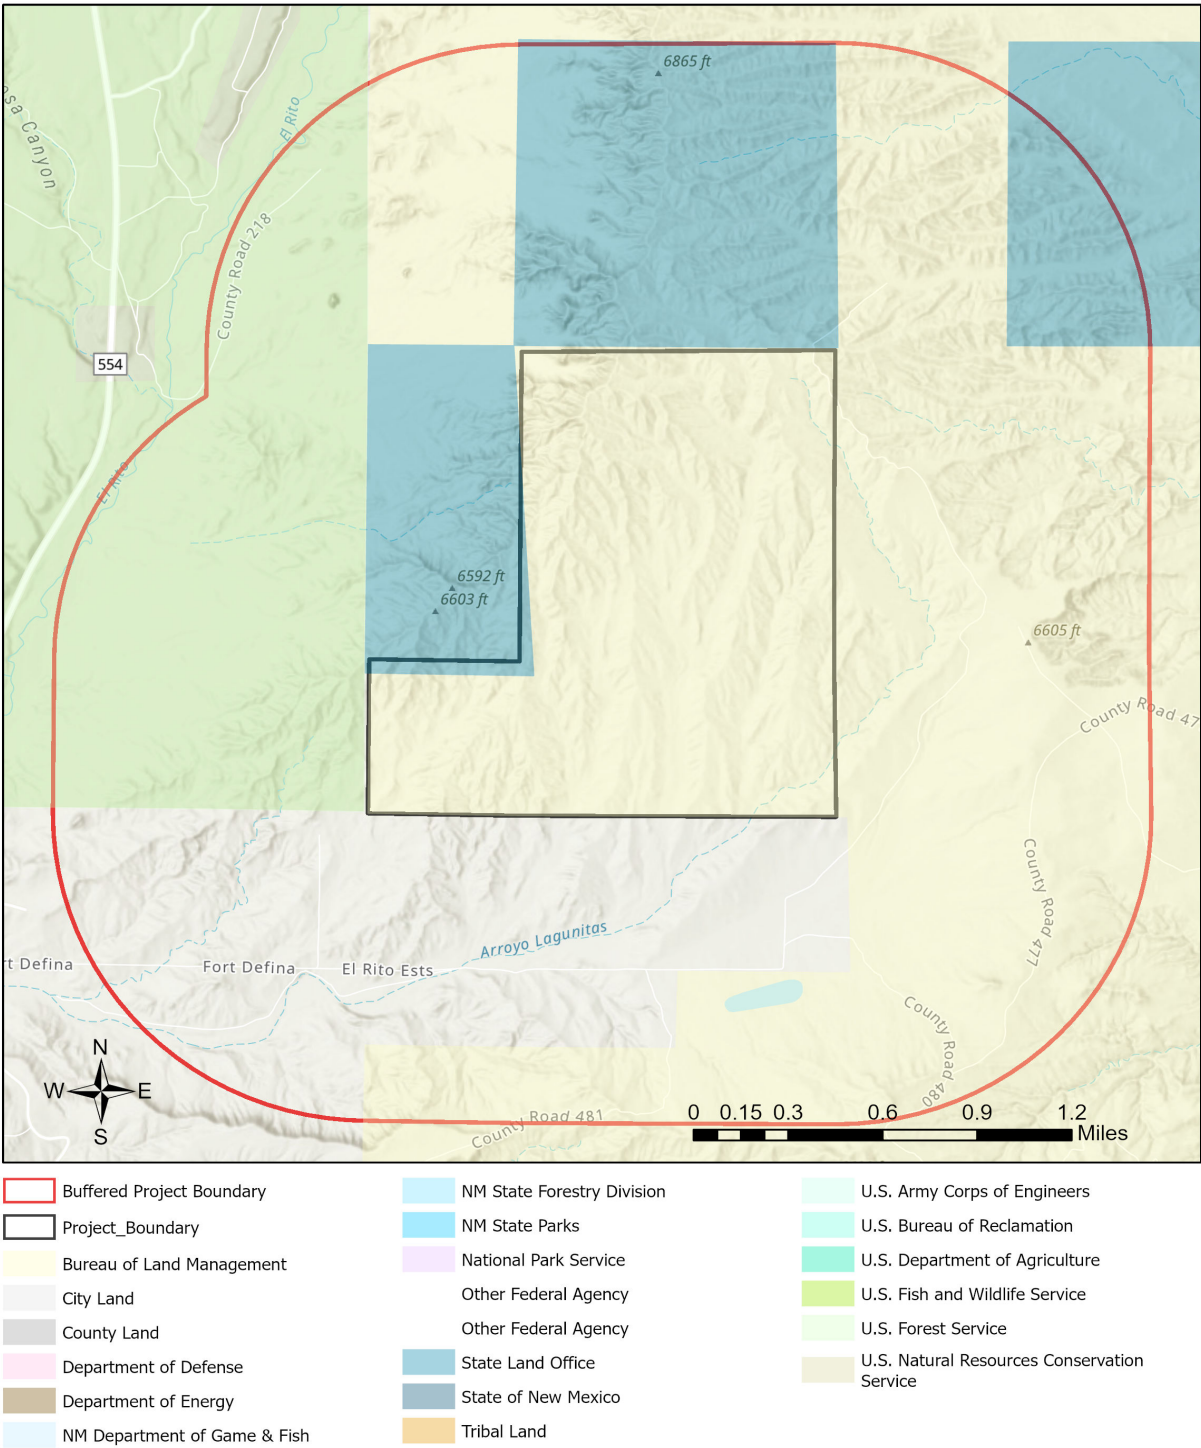

OVERALL STATUS

This report contains an initial list of recommendations regarding potential impacts to wildlife or wildlife habitats from the proposed project; see the Project Recommendations section below for further details. Your project proposal is being forwarded to a New Mexico Department of Game and Fish (Department) biologist for review to determine whether there are any additional recommendations regarding the proposed actions. A Department biologist will be in touch within 30 days if there are further recommendations regarding this project proposal.

About this report:

- This environmental review is based on the project description and location that was entered. The report must be updated if the project type, area, or operational components are modified.
- This is a preliminary environmental screening assessment and report. It is not a substitute for the potential wildlife knowledge gained by having a biologist conduct a field survey of the project area. Federal status and plant data are provided as a courtesy to users. The review is also not intended to replace consultation required under the federal Endangered Species Act (ESA), including impact analyses for federal resources from the U.S. Fish and Wildlife Service (USFWS) using their [Information for Planning and Consultation tool](#).
- This report contains information on wildlife species protected under the ESA and the [Wildlife Conservation Act \(WCA\)](#), [Species of Greatest Conservation Need \(SGCN\)](#), and Species of Economic and Recreational Importance (SERI). Species listed under the ESA are protected from take at the federal level and under the WCA are protected from take at the state level. SGCN are identified in the [State Wildlife Action Plan \(SWAP\) for New Mexico](#); all of these species are considered to be of conservation concern but not all of them are protected from take at the state or federal level. The harvest of all SERI is regulated at the state level. The Department has no authority to designate critical habitat for species listed under the WCA; only the USFWS can designate critical habitat for species listed under the ESA.
- The New Mexico Environmental Review Tool (ERT) utilizes species observation locations and species habitat suitability models, both of which are subject to ongoing change and refinement. Inclusion or omission of a species within a report cannot guarantee species presence or absence within your project area. To determine occurrence of any species listed in this report, or other wildlife that may be present within your project area, onsite surveys conducted by a qualified biologist during appropriate, species-specific survey timelines may be necessary.
- The Department encourages use of the ERT to modify proposed projects for avoidance, minimization, or mitigation of wildlife impacts. However, the ERT is not intended to be used in a repeatedly iterative fashion to adjust project attributes until a previously determined recommendation is generated. The ERT serves to assess impacts once project details are developed. The [New Mexico Crucial Habitat Assessment Tool](#), the data layers from which are included in the ERT, is the appropriate system for advising early-stage project planning and design to avoid areas of anticipated wildlife concerns and associated regulatory requirements.

Project Recommendations

The Department generally makes recommendations for livestock grazing on public land allotments based on site-specific information and effects on wildlife and their habitats. The significance of the effects from recent grazing on these habitats is usually based on ecosystem function and/or biological diversity. The typical attributes analyzed within the Allotment Evaluation (AE) include: 1) soil/site stability assessed by bare ground, compaction, or erosion; 2) hydrologic function indicated by water flow patterns and sediment; and 3) biotic integrity assessed by annual production and composition of cool/warm season plants.

The above attributes are used to determine a "proper functioning condition" for the particular range evaluation and to further assign ratings for the AE. With the large volume of AEs to be assessed across the state, the Department cannot always look at each AE individually. Therefore, any AE below functioning condition should also be assumed to provide diminished wildlife habitat, and the allotment lease should not be reissued until corrective action is taken.

On AEs where indicators rate as properly functioning, and depending on vegetation type, conservative base stocking should be emphasized. Utilization of no more than 35% of key forage species is recommended on an annual basis. This level of intensity provides for allowances of wildlife use, residual cover, and watershed protection.

The Department also recommends the following to maintain or improve rangelands for most classes of wildlife.

- Provide for a desired future condition (wildlife, vegetation, watershed) based on measurable goals within the allotment plan.
- Calculate carrying capacity for the area available for grazing and ensure that domestic livestock stocking rates are at or below carrying capacity. Use calculation methods that consider the natural features of the local landscape and the varying impacts of different types of foraging animals, including larger wild herbivores where possible (e.g., consider the methods described by [Spackman and Ward 2023](#); further information may be obtained from the [Extension Animal Science and Natural Resources program at New Mexico State University](#)).
- An adaptive management plan should be developed to address lack of forage during drought periods.
- Reseeding efforts should utilize native species of grasses, forbs, and shrubs. When possible, use seeds that are sourced from the same region and habitat type as the restoration site or from a region that represents potential future climatic conditions at this site. Habitat improvements should consider wildlife species and promote diversity of forage.
- Water sources should be equally available to all classes of wildlife throughout the year. Escape ramps should be used on all troughs, and ground-level drinkers should be provided on all new water developments.
- Springs/seeps and other sensitive riparian areas may require fencing to protect from overuse by grazing animals. Reference the Department's [Guidelines for Grazing Management in New Mexico's Riparian Areas: Towards Protection of Wildlife and Fisheries Resources](#) for further recommendations regarding grazing in riparian areas.

Burrowing owl (*Athene cunicularia*) may occur within your project area. Burrowing owls are protected from take by the Migratory Bird Treaty Act and under New Mexico state statute. Before any ground disturbing activities occur, the Department recommends that a preliminary burrowing owl survey be conducted by a qualified biologist using the Department's [Burrowing Owl Survey Protocol](#). Should burrowing owls be documented in the project area, please contact the Department or USFWS for further recommendations regarding relocation or avoidance of impacts.

Prairie dog colonies may occur within the vicinity of your project area. Both black-tailed prairie dogs (*Cynomys ludovicianus*) and Gunnison's prairie dogs (*Cynomys gunnisoni*) are designated as New Mexico SGCN, and their colonies provide important habitat for other grassland wildlife. Wherever possible, occupied prairie dog colonies should be left undisturbed, and all project activities should be directed off the colony. Any burrows that are located on the project site should be surveyed by a qualified biologist to determine whether burrows are active or inactive and whether burrowing owls may be utilizing the site. Colonies within the range of the black-tailed prairie dog can be surveyed by a qualified biologist diurnally, year-round using binoculars. Colonies within the range of the Gunnison's prairie dog can be surveyed by a qualified biologist diurnally, using binoculars during the warmer months from April through October and by searching for fairly fresh scat and lack of cobwebs or debris at the mouths of burrows during the cold months (November through March). If ground-disturbing activities cannot be relocated off the prairie dog colony, or if project activities involve control of prairie dogs, the Department recommends live-trapping and relocation of prairie dogs. The Department can provide recommendations regarding suitability of potential translocation areas and procedures.

The proposed project occurs within or near a riparian area. Because riparian areas are important wildlife habitats, the project footprint should avoid removing any riparian vegetation or creating ground disturbance either directly within or affecting the riparian area, unless the project is intended to restore riparian habitat through non-native plant removal and replanting with native species. If your project involves removal of non-native riparian trees or planting of native riparian vegetation, please refer to the Department's habitat handbook guideline for [Restoration and Management of Native and Non-native Trees in Southwestern Riparian Ecosystems](#). The [New Mexico Riparian Habitat Map \(NMRipMap\)](#) may also provide useful information on local riparian habitat composition and structure.

Disclaimers regarding recommendations:

- The Department provides technical guidance to support the persistence of all protected species of native fish and wildlife, including game and nongame wildlife species. Species listed within this report include those that have been documented to occur within the project area, and others that may not have been documented but are projected to occur within the project vicinity.
- Recommendations are provided by the Department under the authority of § 17-1-5.1 New Mexico Statutes Annotated 1978, to provide "communication and consultation with federal and other state agencies, local governments and communities, private organizations and affected interests responsible for habitat, wilderness, recreation, water quality and environmental protection to ensure comprehensive conservation services for hunters, anglers and nonconsumptive wildlife users".
- The Department has no authority for management of plants or Important Plant Areas. The [New Mexico Endangered Plant Program](#), under the Energy, Minerals, and Natural Resources Department's Forestry Division, identifies and develops conservation measures necessary to ensure the survival of plant species within New Mexico. Plant status information is provided within this report as a courtesy to users. Recommendations provided within the ERT may not be sufficient to preclude impacts to rare or sensitive plants, unless conservation measures are identified in coordination with the Endangered Plant Program.
- Additional coordination and/or consultation may also be necessary under the federal ESA or National Environmental Policy Act (NEPA). Further site-specific mitigation recommendations may be proposed during ESA consultation and/or NEPA analyses or through coordination with affected federal agencies.
